HIV AND SRHR LINKAGES INFOGRAPHIC SNAPSHOT

GHANA 2016

This country snapshot provides an overview of national level data for the full scope of HIV and sexual & reproductive health and rights (SRHR) linkages/integration at three levels:

- enabling environment (policy and legal)
- health systems
- integrated service delivery

By highlighting results, areas that need strengthening, and data gaps, this snapshot can be used for determining priorities, programme planning, and resource mobilization.

▲ also p.10

E.g. address
structural determinants
such as stigma and
discrimination faced by
people living with HIV
and key populations.

E.g. strengthen
joint planning,
procurement, and supply
chain management
systems for HIV and
SRH commodities.

E.g. address human rights and development concerns such as gender-based violence and gender inequality. ENABLING ENVIRONMENT HEALTH SYSTEMS

SERVICES

E.g. support greater task shifting/sharing among SRH- and HIVrelated health workers.

SRH SERVICES

Family planning
Maternal, newborn and
child health*
Sexually transmitted
infections

Other SRH areas Gender-based violence INTEGRATED

HIV SERVICES
Prevention
Treatment
Care
Support

E.g. offer HIV testing during antenatal care and family planning services. E.g. offer
cervical cancer and
family planning services
at antiretroviral treatment
(ART) centres and offer ART
at maternal health
centres.

*Maternal health is an SRH service, which is often clustered with newborn and child health services.

Linkages versus integration²

Linkages refer to bi-directional synergies in policy, systems, and services between SRH and HIV. It refers to a broader human rights-based approach, of which service integration is a subset.

Integration refers to the service delivery level and can be understood as joining operational programmes to ensure effective outcomes through many modalities (multi-tasked providers, referral, one-stop shop services under one roof, etc.).

Upholding human rights is intrinsic to the linkages agenda, in particular the human rights of people living with HIV, key populations, and women and girls.3

Compendium: Indicators and Related Assessment Tools. Available at: http://bit.ly/1KVaET1

* It is recognized that reducing stigma and discrimination and genderbased violence are also impact level measures and the outcome measures influence each other.

Key HIV and SRHR intersections: Ghana data^{3a}

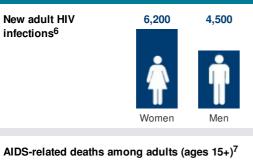

The intrinsic connections between HIV and SRHR are well-established, especially as HIV is predominantly sexually transmitted or associated with pregnancy, childbirth and breastfeeding.4

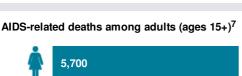

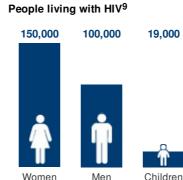

Population size 27.4 million^{4a} Life expectancy at birth 61^{4b} Fertility rate 4.2^{4c}

HIV is a leading cause of death in women of reproductive age (globally)⁵

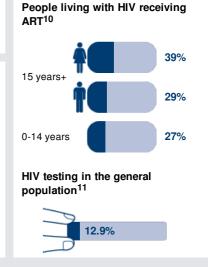

HIV prevalence

(ages 15-49)8

5.500

Maternal mortality ratio 13

319 per 100,000 live births

Maternal deaths attributed to HIV14

Gender-based violence is a cause and consequence of HIV¹⁵ ▲ also p.5 & 7

Prevalence of recent intimate

20%

HIV transmission to infants can occur during pregnancy, childbirth, and breastfeeding. This is more likely where there is acute maternal HIV infection. 17 ▲ also p.5

Mother-to-child HIV transmission rate (after breastfeeding)¹⁸

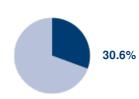

Pregnant women who know their HIV status¹⁹

Demand for family planning satisfied with a modern method of contraception (15-49)20

Certain sexually transmitted infections (STIs) significantly increase the risk of acquiring and ▲ also p.7 transmitting HIV²²

Number of adults reported with syphilis²³

12,885

Male and female condoms provide triple protection from unintended pregnancies, HIV, and other STIs

Condom use at last sex²⁴

Demand for family planning satisfied with a modern method of contraception for women living with HIV (15-49)²¹

Enabling environment (policy and legal)

SRHR and HIV strategies and policies should be interconnected to increase service provision and uptake. Effective responses also must go beyond health services to address human rights and development.

Strategies and policies

Is there a national HIV strategy?²⁵ If yes, have the following SRHR components been included as a measurable target:^{25a} Condoms (with reference to STI Yes prevention / contraceptive method)? Prevention / elimination of mother-to-child Mentioned transmission of HIV? SRHR of people living with HIV? No Sexually transmitted infections? Yes Gender based violence? No

Is there a national SRHR strategy?²⁶ If yes, have the following HIV components been included as a measurable target:^{26a} Condoms (with reference to HIV No prevention)? Prevention / elimination of mother to child transmission of HIV? SRHR of people living with HIV? No Sexually transmitted infections? Mentioned HIV counselling and testing? No

People living with HIV

Are there laws that: 27a

criminalise HIV No 28a

transmission or exposure? 28

impose HIV specific restrictions on entry, stay or residence? 29

address HIV-related discrimination and protect people living with HIV? 30

Laws

Are there laws that: address gender-	Yes		36
based violence? ³⁶	. 50		36
penalise rape in marriage? ³⁷	No		37
allow free entry into marriage and divorce? ³⁸	Yes	Full enforcement	38
allow the removal of violent spouses? ³⁹	Yes	Limited enforcement	39

Other laws

Are there laws that:

make sexuality education mandatory? 60

allow legal abortion? 61

Are there laws that:

Mo

Yes: To save a woman's life, preserve a woman's physical health, preserve a woman's mental health, and in case of rape or incest as well as because of foetal impairment.

Prohibit female genital mutiliation? 62

Age of Consent		▲ also p.5 & 8
9	What is the minimum legal age for marriage without parental consent? ⁴³	18 years
	What is the legal age for HIV testing without parental consent? ⁴⁴	18 years (15 years if mature enough)
0000000	What is the legal age for accessing contraceptives? ⁴⁵	16 years
	What is the legal age for consent to sexual intercourse? ⁴⁶	16 years

Stigma faced by people living with HIV

People living with HIV often face stigma and discrimination. A non-supportive environment can drive people living with HIV away from SRHR and HIV prevention, treatment, care and support services, hindering the AIDS response.

Percentage of general population reporting discriminatory attitudes to HIV⁴⁷

44.5%

Has the Stigma Index been conducted?48

201449

A sample of 427 PLHIV (women 71.4%, n=305, men 28.6%, n=122)

1.2% (n=5)
3.1% (n=13)
3.1%

Female 94.8%; Male 94.3%
66.7%

Reported experience of stigma and discrimination that hinder access to HIV and SRH services

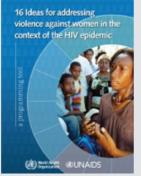

Sought redress if rights violated 20.5%

Women's empowerment

Achieving gender equality and empowering women (Sustainable Development Goal 5) is essential in its own right and also affects health status. It is a broad agenda that includes: ending stigma and discrimination, violence, and harmful practices; ensuring autonomy in health decisions; and accessing SRHR and equal rights to economic resources.50

Gender-based violence

Intimate partner violence has been shown to increase the risk of HIV infection by around 50%. Violence, and the fear of violence, may deter women and girls from seeking HIV testing, disclosing HIV-positive status, and seeking other services for their HIV and SRHR needs.51 Visit http://bit.ly/1PIpTip

Prevalence of recent intimate partner violence⁵²

20%

Gender-based violence is a cause and consequence of HIV

Ability to participate in decisions regarding their own health^{50a}

Girls married before 1853

Intimate partner violence prevention programmes⁵⁴

Women who believe wife is justified in refusing sex with husband50b

Women who agree husband is justified in hitting or beating his wife:

for at least one specified reason53a

if she refuses sex with him53b

support violence

Children and Social Protection

Orphanhood is frequently accompanied by prejudice and increased poverty, factors that can jeopardize children's chances of completing school education and may lead to increased vulnerability to HIV and poor SRHR outcomes. As such, economic support (with a focus on social assistance and livelihoods assistance) to poor and HIV-affected households remains a high priority in many comprehensive care and support programmes.55

Children whose households received external support⁵⁶

AIDS deaths in adults occur just at the time in their lives when they are forming families and bringing up children.

Ratio of school attendance of orphans to nonorphans (aged 10-14 years)57

Children who have lost one or both parents due to AIDS58

160,000

Health systems

Integrating SRHR and HIV services requires addressing components of health systems.

These include coordination, joint partnerships, planning and budgeting, human

resources, procurement and supply chain management, and monitoring and evaluation.

Human resources

Nurses and midwives per 1,00060

Community and traditional health workers per 1,000⁶¹

Are there SRHR training materials and curricular $\,$ Yes (comprehensive) that include HIV? 62 Are there HIV training materials and curricula that include SRHR?⁶³ Yes (comprehensive) To what extent is supportive supervision for Fully integrated SRHR and HIV integrated at the health service-delivery level?⁶⁴

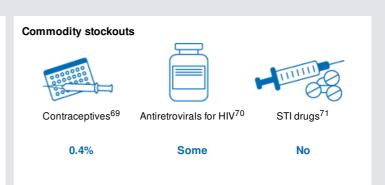

Is there a tool for integrated supervision available?⁶⁵

Training and supervision

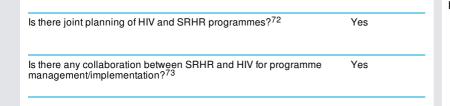

Yes

Logistics and supplies

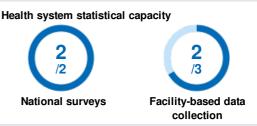

HIV and SRHR commodities	
Are there integrated supply systems? ⁶⁶	Fully integrated
Are there integrated ordering systems ⁶⁷	Fully integrated
Are there integrated monitoring systems? ⁶⁸	Fully integrated

Coordination, planning and budgeting

Health information systems⁷⁴

SRHR and HIV service coverage

HIV testing and counselling facilities per 100,000 adult population⁷⁵

Primary level service delivery points offering at least three modern methods of contraception⁷⁶

Rapid Assessment of SRH and HIV linkages⁷⁷

Has the Rapid Assessment for Sexual and Reproductive Health and HIV Linkages been conducted?⁷⁸

Integrated service delivery

Providing integrated services enables clients to receive as many quality services as

possible at the same time and in the same place, especially at the primary healthcare

level. This can happen through government, civil society, and private providers.

Integrated service provision

Health facilities provide HIV services integrated with other health services

HIV counselling and testing with SRH⁷⁹

, Qô

EMTCT with antenatal care/maternal and child health⁸⁰

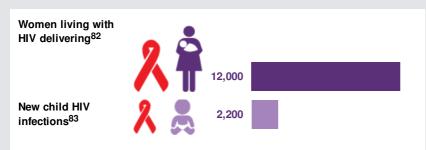

Elimination of mother-to-child transmission of HIV (EMTCT)

Eliminating new HIV infections among children and keeping their mothers alive is based on a four-pronged strategy. 81

Many

Indicators for elimination of mother-to-child transmission of HIV Prong 1: new HIV infections among women 15-49⁸⁷ 5,800 Prong 2: unmet need for family planning for women of reproductive age⁸⁸ 4% Prong 3: final mother-to-child HIV transmission rate⁸⁹ 17.7% Prong 3: women receiving antiretrovirals (ARVs – excluding single dose nevirapine) to prevent new infections among children⁹⁰ Prong 3: women or infants receiving ARVs during breastfeeding⁹¹ 33% Prong 4: ART coverage among children under 15 years⁹² 27%

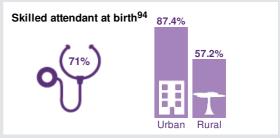

Demand for family planning satisfied with a modern method of contraception for women living with HIV (15-49)⁹⁵

Pregnant women attending an antenatal care clinic at least once 84 at least 4 times 85 whose sexual partners were tested for HIV in the last 12 months 86 Pregnant women who know their HIV status 93

Dual elimination of mother-to-child transmission of HIV and syphilis

In 2007 WHO launched an initiative for the global elimination of congenital syphilis, outlined in the global elimination of congenital syphilis: rationale and strategy for action. 96 Initiatives are now ongoing for dual elimination of mother-to-child transmission of HIV and syphilis as an integrated process, including data validation. 97

http://bit.ly/1jCx7sf

Congenital syphilis rate (per 100,000 live births) ⁹⁸	DATA NOT AVAILABLE
Antenatal care attendees tested for syphilis at first antenatal care visit ⁹⁹	41.5%
Antenatal care attendees who test positive for syphilis ¹⁰⁰	2.3%
Antenatal care attendees positive for syphilis who are treated appropriately ¹⁰¹	75%

Focus on adolescents and youth

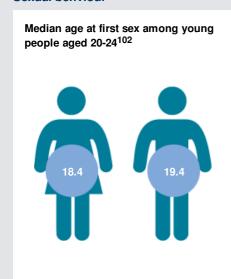

Young people need access to a range of SRHR and HIV information and services

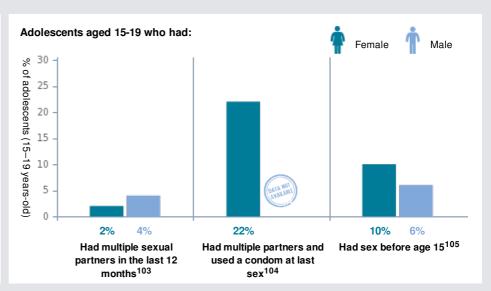

on a broad range of topics related to their physical, social, emotional,

and sexual development.

Young people, including those living with HIV and from key populations, need access to comprehensive services and a supportive legal framework.

Sexual behviour

Youth unemployment¹⁰⁹

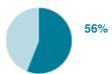

Unmet need for family planning, among young women aged 15-19¹⁰⁶

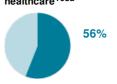

Young women aged 15-19 who have ever had a child¹⁰⁷

Recent births to mothers under 20 that were unplanned¹⁰⁸

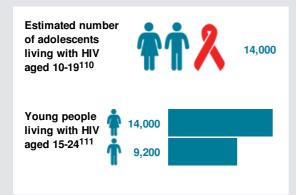

Young women aged 15-19 able to participate in decisions about their healthcare 108a

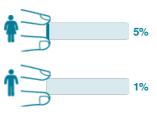

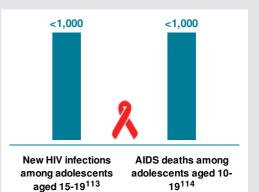

HIV

Adolescents aged 15-19 who were ever tested for HIV and received the results¹¹²

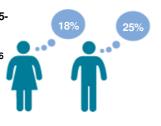

Knowledge and comprehensive sexuality education

Young people aged
15-19 who have heard
of family planning on
any of the three
sources (radio, TV
or newspapers)¹¹⁵

Adolescents aged 15-19 who have comprehensive knowledge of HIV¹¹⁶

Schools that provided skills-based HIV and sexuality education in the previous academic

▲ also p.4

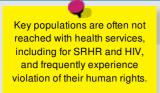

Focus on key populations

Key populations, including men who have sex with men, people who use drugs, sex workers

and transgender people typically have higher HIV prevalence than the general population.

The criminalization of key populations drives people away from health services, increasing

vulnerability to negative SRHR and HIV outcomes, as well as to stigma, discrimination, and violence.

Men who have sex with men

http://bit.ly/1LWyfQ6

^{*}Similar implementation tools for HIV/STI programming with other key populations are currently under development.

Additional regional and national data

This infographic snapshot builds on an overarching framework defining HIV and SRHR linkages/

integration and provides related national data. Specific aspects of HIV and SRHR linkages/

integration vary by region and country due to different types of HIV epidemics and structural drivers

of HIV and SRHR. Therefore, a differentiated approach to investment and programming is required.

The suggested way forward

- 1. Disseminate the snapshot broadly to key decision-makers in the government (e.g. Ministry of Health and National AIDS Commission), programme managers, donors, UN agencies, civil society organisations and community-based organisations, and use for advocacy at key events.
- 2. Review the data presented in the snapshot with key HIV and SRHR stakeholders to identify and discuss areas where further work is particularly needed.
- **3. Convene a technical working group** with HIV and SRHR stakeholders to jointly plan, coordinate activities and monitor progress on HIV and SRHR linkages/integration.
- **4.** Work with the Ministries of Justice, Education and Health, and other appropriate sectors to eliminate human rights violations, such as gender-based violence, early and forced marriage and stigma and discrimination.
- **5. Use the snapshot** when developing and evaluating strategies, operational plans and funding proposals.
- 6. Collaborate with relevant data collection entities to fill gaps where data are not available.

The Inter-agency Working Group on Sexual and Reproductive Health (SRH) and HIV Linkages is convened by UNFPA, WHO, and IPPF and works with more than 20 organizations to:

- advocate for political commitment to a linked SRH and HIV agenda;
- support national action to strengthen SRH and HIV linkages at the policy, systems, and service delivery levels; and
- create a shared understanding of SRH and HIV linkages by building the evidence base and sharing research, good practice, and lessons learnt.
